Implementation Plan Elements

ELEMENT 1 Best Management Practices (BMPs)

The following BMPs have been identified as significant opportunities to cost effectively reduce methane emissions from the production sector. They were selected based on their applicability to the industry, economic feasibility, and cost-effectiveness. There are 2 core BMPs for the production sector:

- **BMP 1** Identify and replace high-bleed pneumatic devices
- **BMP 2** Install flash tank separators on glycol dehydrators

For detailed information on these BMPs, please refer to the Lessons Learned publications on the Natural Gas STAR Web site: <www.epa.gov/gasstar/lessons.htm>.

ELEMENT 2 Partner Reported Opportunities (PROs)

Current partners have reported many processes and technologies that are considered "other Best Management Practices" by the program. New partners are encouraged to evaluate and report current and new practices or technologies that cost effectively reduce methane emissions. PROs are made available to all partners, and can be viewed at: www.epa.gov/gasstar/pro/index.htm#table.

ELEMENT 3 Inventory Past Reductions

Partners are encouraged to report past methane emission reductions back to 1990. Accounting for these historical reductions will create a permanent record of your company's methane emission reduction efforts. More information is available in the Spring 1999 Natural Gas STAR Partner Update, which can be viewed at:

emission reduction efforts. More information is available in the Spring 1999 Natural Gas STAR Partner Update, which can be viewed at:

ELEMENT 1 Best Management Practices

BMP 1 Identify and Replace High-Bleed Pneumatic Devices

Pneumatic devices used to control and monitor gas and liquid flows and levels in dehydrators and separators, temperature in dehydrator regenerators, and pressure in flash tanks emit large amounts of methane into the atmosphere. Replacing these with low- or no-bleed devices reduces or eliminates emissions and improves safety.

Estimated Reduction Potential 124 Mcf/year/device

no-bleed devices	reduces or eliminates e	missions a	nd improves safety.

	Additional I	nformatio	n on Anticipated Plans a	nd Projects

If additional space is needed, please continue on the back.

BMP 2 Install Flash Tank Separators on Glycol Dehydrators

Installing a flash tank separator in a glycol dehydrator facilitates the removal of methane and natural gas liquids from the glycol stream. The recovered gas can be put back into the pipeline, used as a fuel on-site, or flared.

Estimated Reduction
Potential
170 scf/MMcf of throughput

ELEMENT 2 Best Management Practices

D	D	റ	
г	п	v	ь

Your company may take advantage of additional technologies or practices to reduce methane emissions. These can be reported to Natural Gas STAR as PROs. Following is a list of some of the PROs that have been reported by other Gas STAR partners, which may be applicable to your operations (for more information on these PROs, please view: www.epa.gov/gasstar/pro/index.htm and www.epa.gov/gasstar/pro/index.htm):

- ☆ Install Vapor Recovery Units (VRUs)
- ☆ Install flares
- ☆ Install electronic safety devices

- ☆ Install instrument air systems
- ☆ Eliminate unnecessary equipment and/or systems
- ☆ Install plunger lifts in gas wells

ELEMENT 3 Inventory Past Reductions

An inventory of past reductions will help to create a permanent record of your past efforts.

As a first step, many new partners find it useful to inventory and docume	ent past metha	ane emission reduction	วท				
efforts. The inventory process helps companies quantify the success of	their past acti	ivities and target futu	re				
emission reduction efforts. Historical emission reductions identified as part of the inventory process can be reported to the Gas STAR Program.							
Will you inventory past activities to include in your annual report?	☐ Yes	□ No					

If yes, please describe your company's plans for reviewing past emission reduction activities.

The Natural Gas STAR Program thanks you for your time.
